
LIST OF SERVICES

Who We Are

Artemel & Associates and Sustain Our Planet have teamed up to create a groundbreaking partnership called the Sustainable Cities Program. This unique and progressive program provides guidance and helps cities and towns of all sizes create and implement long term environmental strategies that support a sustainable, affordable, and energy efficient future.

Our team specializes in providing a personal, hands-on approach. We help your city understand the green movement and make changes that will make you more efficient, help you save money, and help your city reduce overall waste. Working with Artemel & Associates and Sustain Our Planet provides your city with access to environmental champions who are dedicated to your organization and will create a proactive strategy that will save you money and facilitate your city's green vision.

What We Do

We understand each municipality is unique. Because of this, we conduct an extensive evaluation and provide detailed recommendations that are based on the individual needs of our clients. We also provide a range of services to help make hitting your sustainability targets as simple and easy as possible.

Consulting Services

We offer an extensive list of consulting services for predevelopment, community planning, urban design and revitalization projects. As part of our services for cities, we can:

- * Assist in planning and preparing for redevelopment and renewal projects
- * Provide feasibility studies for sustainable concepts and transit-oriented development planning
- * Assist in updating your city's Comprehensive Plan to incorporate sustainability features
- * Calculate the projected carbon footprint of projects that are proposed for your city
- * Conduct a Carbon Impact Analysis for your city that tracks and analyzes your company's carbon footprint over a specified period of time
- * Provide a means for your city to offset its carbon footprint through verified, registered, approved and tracked carbon credit mechanisms
- * Research and evaluate environmental policies and procedures
- * List step-by-step recommendations that describe how your city can become more sustainable and improve its carbon footprint
- * Provide guidance to management and employees about what a carbon footprint is, why it matters, and how everyone can help improve it
